

READING CLIMATE ACTION COMMITMENT

Reading has set a target of net zero carbon emissions by 2030 and needs every organisation in the town to help achieve this. It will also move us towards a dynamic and resilient economy where our businesses can thrive and where all our residents will have access to good quality, secure jobs and the highest quality of life.

I commit my organisation to the following actions:

1. Measure our energy usage and take steps to reduce it
2. Measure our water usage and take steps to reduce it
3. Measure our waste and take steps to reduce it
4. Encourage the reduction of single use items and monitor this change
5. Introduce a sustainable procurement policy with our suppliers
6. Work to embed climate change goals into my organisation's KPIs
7. Set up an employee engagement programme to drive behaviour change in the business
8. Get involved in local environmental projects
9. Network and collaborate with other organisations in the town to promote carbon emissions reduction and environmental protection
10. Work towards adopting a science-based decarbonisation target in line with a goal of net zero by 2030

Signed

M Harrison
